## Projects

---

### NoteHive | Kotlin, MVVM, ROOM Database, Adapter, View Model

- Created an Android application using Kotlin and Android Studio to create notes.
- These notes can be made by giving a title to them and then adding the text in the text in the section below.
- Anyone making the note can search for a specific note, can edit it and can also delete it.
- GitHub

### TechBrain | Kotlin, Firebase

- Created an Android application using Kotlin and Android Studio to take quiz on various tech related topics.
- In this application there are various quiz models each with a different set and number of questions.
- Also there is time restriction for the user to complete the particular quiz.
- At the end the user can view their status if they have passed the tests or failed to do so.
- GitHub

### Assign TODO | Kotlin, Android Studio

- Created an Android application using Kotlin and Android studio where a person can assign task to others in a team being a team leader.
- In this application the user can first login and in that select the role.
- The particular tasks can be given and their progress can also be tracked.
- GitHub
